

How To Determine The Version Of A PL File

After loading a format in System Administrator program 11, Modify Reports, the version of that PL file is displayed as shown. Note that the version can be different from one module to another.

The screenshot shows a DOS prompt window titled "DOS Prompt - gotest" with a menu bar containing "Edit", "Save", "Print", "Form Size", and "Quit". The main content is a report header with the following fields:

Module Code	PR	Company	00	Line
Program	26	Format	1	Section 1
PL Vers	4.01	Dot Matrix	W-2/W2	ID 2
Detail				

The report body contains several lines of "XXXXXX" characters. A yellow arrow points from a callout box to the "PL Vers 4.01" field. The callout box contains the text: "Read in a format to see the version of the PL file." At the bottom of the window, there is a footer area with "F1=Help" on the left and "Program = SA11-Modify Reports (c) 1999-2004 Roundtable Software" on the right.
